### 1 Erster Abschnitt

Vor dem Beginn der Installation sollte man sich vergewissern, ob nicht eine bereits vorhandene  $\TeX$ -Installation existiert, die schon Umgebungsvariablen entsprechend gesetzt hat. Insbesondere unter Windows kann es hier zu Problemen kommen, sicherheitshalber sollte man eventuell vorher eine existierende  $\TeX$ -Installation entfernen.

### 2 Zweiter Abschnitt

Vor dem Beginn der Installation sollte man sich vergewissern, ob nicht eine bereits vorhandene  $\TeX$ -Installation existiert, die schon Umgebungsvariablen entsprechend gesetzt hat. Insbesondere unter Windows kann es hier zu Problemen kommen, sicherheitshalber sollte man eventuell vorher eine existierende  $\TeX$ -Installation entfernen.

### 3 Dritter Abschnitt

Vor dem Beginn der Installation sollte man sich vergewissern, ob nicht eine bereits vorhandene  $\TeX$ -Installation existiert, die schon Umgebungsvariablen entsprechend gesetzt hat. Insbesondere unter Windows kann es hier zu Problemen kommen, sicherheitshalber sollte man eventuell vorher eine existierende  $\TeX$ -Installation entfernen.

## Objekt und Caption

---

Abbildung 3:  
What a nice Caption :-)

<i>Keyword</i>	<i>Default</i>	<i>Description</i>
<b>floatPos</b>	<b>tbp</b>	This is the same default placement setting as in standard L <sup>A</sup> T <sub>E</sub> X; maybe not always the best setting.
<b>rotAngle</b>	<b>0</b>	The value for the angle if both the object and the caption should be rotated together.
<b>capWidth</b>	<b>n</b>	The width of the caption. Can be <b>n</b> for a natural width given by the current linewidth, <b>w</b> for the width of the object, <b>h</b> for the height of the object, or a scale factor for <code>\columnwidth</code> .
<b>capAngle</b>	<b>0</b>	The integer value for the angle if the caption should be rotated. Positive is counter-clockwise.
<b>capPos</b>	<b>bottom</b>	The position of the caption relative to the object. Possible values: <b>before</b> : <i>always</i> before (left) from the object. <b>top</b> : <i>always</i> on top of the object. <b>left</b> : <i>always</i> before (left) from the object, but on the same page in twocolumn mode.

**after:** *always* after (right) from the object.

**bottom:** *always* on the bottom of the object.

**right:** *always* after (right) from the object, but on the same page in twocolumn mode.

**inner:** in twoside mode always typeset at the inner margin.

**outer:** in twoside mode always typeset at the outer margin.

**evenPage:** in twoside mode with fullpage objects always on an even page.

**oddPage:** in twoside mode with fullpage objects always on an odd page.

<b>capVPos</b>	<b>center</b>	Only used when <b>capPos=left   right</b> ; in these cases, the caption can be vertically placed at the <b>bottom, center</b> or <b>top</b> .
<b>objectPos</b>	<b>center</b>	Horizontal placement of the object relative to the document. Possible values are ( <b>left</b> , ( <b>center</b> , ( <b>right</b> .
<b>objectAngle</b>	<b>0</b>	Integer value for the angle if the object should be rotated. Positive is counter-clockwise.

<b>floatCapSep</b>	<b>5pt</b>	Additional space between the object and a left- or right-placed caption.
<b>useOBox</b>	<b>false</b>	Instead of passing the object as a parameter to <code>\hvFloat</code> , with <b>useOBox=true</b> the contents of the predefined box <code>\hvOBox</code> is used.
<b>onlyText</b>	<b>false</b>	The caption is printed as normal text with no entry in any list of ...
<b>nonFloat</b>	<b>false</b>	The object isn't put in a floating environment, but printed as standard text with an additional caption. The float counter is increased as usual and can be referenced.
<b>wide</b>	<b>false</b>	The float can use <code>\textwidth + \marginparwidth</code> as horizontal width.
<b>objectFrame</b>	<b>false</b>	Put a frame with no separation around the float object.
<b>style</b>	<i>none</i>	Use a defined style.
<b>capFormat</b>	<i>none</i>	Define formatting options for <code>\caption</code> ; see documentation of package <b>caption</b> .
<b>subcapFormat</b>	<i>none</i>	Define formatting options for <code>\subcaption</code> .

<b>fullpage</b>	<b>false</b>	Use a complete column in twocolumn mode.
<b>FullPage</b>	<b>false</b>	Use the full text area for the object.
<b>FULLPAGE</b>	<b>false</b>	Use the full paper width/height for the object.
<b>doublePage</b>	<b>false</b>	Use the text area on a doublepage with additional text.
<b>doublePAGE</b>	<b>false</b>	Use the text area on a doublepage without additional text.
<b>doubleFULLPAGE</b>	<b>false</b>	Use the paperwidth on a doublepage without additional text.
<b>vFill</b>	<b>false</b>	Put a <code>\vfill</code> between every two objects in a multi- or subfloat.
<b>sameHeight</b>	<b>false</b>	use the same text height on both pages for a <b>doublePage</b> object.

of the image and a rotation of the caption and the object.)(fig:3)
```

float

Figure 11: Caption vertically centered right beside the float with a caption width of the height of the image and a rotation of the caption and the object.

## 6 Caption inner or outer

Setting the caption position to *inner* or *outer* makes only sense for a document in twoside mode. For a oneside document *inner* is the same as *left* and *outer* is the same as *right*. We show only the code for the first image with the setting `capPos=inner`, whereas the second one chooses only `capPos=outer`.

Code for figure 12:

```
\hfloat[capPos=inner]{figure}{\includegraphics{rose}}%
[Centered Caption on the inner side]{%
Caption set with the parameter setting \texttt{capPos=inner}, which will be
a caption on the right side for an even page and on the left side for
an odd page.}(fig:20)
```

float  
capPos=inner

Figure 12: Caption set with the parameter setting `capPos=inner`, which will be a caption on the right side for an even page and on the left side for an odd page.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest geburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of

the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\hfloat[capPos=inner]{figure}{\includegraphics{rose}}%
[Centered Caption on the inner side]{%
Caption set with the parameter setting \texttt{capPos=inner}, which will be
a caption on the right side for an even page and on the left side for
an odd page.}(fig:20b)
```

float  
capPos=inner

Figure 13: Caption set with the parameter setting `capPos=inner`, which will be a caption on the right side for an even page and on the left side for an odd page.

Now the same Image with `capPos=outer`. The current pagenumber is 15, an odd page. We now set a pagebreak at the end of the second image to see if it works with *inner/outer*.

float

Figure 14: Caption at the bottom right beside the float with a caption width of `0.5\columnwidth` and `capPos=outer`.

We have an odd page, the reason why figure 13 has the caption for *inner* on the left side and figure 14 for *outer* on the right side.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Code for figure 15:

```
\hvFloat{
```

# Seite 15

## 9 Wide floats

Figure 22: Caption at top right beside the float and object position left and the option wide.

Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

The code for figure 23:

```
\hFloat[wide,
capPos=left,
capPos=top,
objectPos=right,
]{}figure{\includegraphics[width=0.75\linewidth]{CTAN}}%
(Caption at top left beside the object and object position left and
the option \texttt{wide}.)(fig:80)
```

Figure 23: Caption at top left beside the object and object position left and the option wide.

For a twosided document it will place the object always in the margin.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Haaerdest gelburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\hFloat[wide,
capPos=inner,
capPos=top,
]{}figure{\includegraphics[width=0.75\linewidth]{CTAN}}%
(Caption at top and inner beside the float and object position right and
the option \texttt{wide}.)(fig:81)
```

Now we set the same image with the same setting on the next page. The caption will change its side due to the setting capPos=outer .

Figure 24: Caption at top and inner beside the float and object position right and the option wide.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Haaerdest gelburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\hFloat[wide,
capPos=inner,
capPos=top,
]{}figure{\includegraphics[width=0.75\linewidth]{CTAN}}%
(Caption at top inner beside the float and object position right and
the option \texttt{wide}.)(fig:81)
```

Figure 25: Caption at top inner beside the float and object position right and the option wide.

## 10 Full Page Width in Landscape Mode

If you do not want to load the package `lscap` (or `pdfscape`) you can use the `floatPos=p` option to put the image on an own page and rotated by 90 degrees (figure 26).

Code for figure 26:

```
\hFloat[%
floatPos=p,
capPos=bottom,
rotAngle=90,
objectPos=center,
]{}figure{\includegraphics[width=0.9\textwidth]{CTAN}}%
[Object and Caption in Landscape mode]{%
Caption and object in landscape mode. \hlinetext}{fig:9)
```

The float can also be put to the left or to the right (above/below in landscape) with the `objectPos=l` parameter

## 9 Wide floats

Figure 22: Caption at top right beside the float and object position left and the option wide.

Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

The code for figure 23:

```
\hfloat[wide,
  capPos=left,
  capPos=top,
  objectPos=right,
]{figure}{\includegraphics[width=0.75\linewidth]{CTAN}}%
(Caption at top left beside the object and object position left and
the option \texttt{wide}.)(fig:80)
```

Figure 23: Caption at top left beside the object and object position left and the option wide.

For a twosided document it will place the object always in the margin.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Haaerdest geburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\hfloat[wide,
  capPos=inner,
  capPos=top,
]{figure}{\includegraphics[width=0.75\linewidth]{CTAN}}%
(Caption at top inner beside the float and object position right and
the option \texttt{wide}.)(fig:81)
```

Figure 24: Caption at top inner beside the float and object position right and the option wide.

Now we set the same image with the same caption on the next page. The caption will change its side due to the setting capPos=outer.

Figure 24: Caption at top and inner beside the float and object position right and the option wide.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? ```

Figure 25: Caption at top inner beside the float and object position right and the option wide.

## 10 Full Page Width in Landscape Mode

If you do not want to load the package `lscap` (or `pdfscap`) you can use the `floatPos=p` option to put the image on an own page and rotated by 90 degrees (figure 26).

Code for figure 26:

```
\hfloat[%
  floatPos=p,
  capPos=bottom,
  rotAngle=90,
  objectPos=center,
]{figure}{\includegraphics[width=0.9\textwidth]{CTAN}}%
[Object and Caption in Landscape mode.](fig:83)(fig:27)
```

The float can also be put to the left or to the right (above selected in landscape) with the `objectPos=l` parameter

den Grauwert der Schrift an. Ist das wirklich so? Ist es gleichgültig, ob ich schreibe: „Dies ist ein Blindtext“ oder „Huaudet gefburn?“ Kjflj – mitnichten! Ein Blindtext bietet mir wichtige Informationen. An ihm messe ich die Lesbarkeit einer Schrift, ihre Anmutung, wie harmonisch die Figuren zueinander stehen und prüfe, wie breit oder schmal sie läuft. Ein Blindtext sollte möglichst viele verschiedene Buchstaben enthalten und in der Originalsprache gesetzt sein. Er muss keinen Sinn ergeben, sollte aber lesbar sein. Fremdsprachige Texte wie „Lorem ipsum“ dienen nicht dem eigentlichen Zweck, da sie eine falsche Anmutung vermitteln.

Nach diesem vierten Absatz beginnen wir eine neue Zahlung. Dies hier ist ein Blindtext zum Testen von Textausgaben. Wer diesen Text liest, ist selbst schuld. Der Text gibt lediglich den Grauwert der Schrift an. Ist das wirklich so? Ist es gleichgültig, ob ich schreibe: „Dies ist ein Blindtext“ oder „Huaudet gefburn?“ Kjflj – mitnichten! Ein Blindtext bietet mir wichtige Informationen. An ihm messe ich die Lesbarkeit einer Schrift, ihre Anmutung, wie harmonisch die Figuren zueinander stehen und prüfe, wie breit oder schmal sie läuft. Ein Blindtext sollte möglichst viele verschiedene Buchstaben enthalten und in der Originalsprache gesetzt sein. Er muss keinen Sinn ergeben, sollte aber lesbar sein. Fremdsprachige Texte wie „Lorem ipsum“ dienen nicht dem eigentlichen Zweck, da sie eine falsche Anmutung vermitteln.

Anmutung, wie harmonisch die Figuren zueinander stehen und prüfe, wie breit oder schmal sie läuft. Ein Blindtext sollte möglichst viele verschiedene Buchstaben enthalten und in der Originalsprache gesetzt sein. Er muss keinen Sinn ergeben, sollte aber lesbar sein. Fremdsprachige Texte wie „Lorem ipsum“ dienen nicht dem eigentlichen Zweck, da sie eine falsche Anmutung vermitteln.

Dies hier ist der zweite Absatz. Dies hier ist ein Blindtext zum Testen von Textausgaben. Wer diesen Text liest, ist selbst schuld. Der Text gibt lediglich den Grauwert der Schrift an. Ist das wirklich so? Ist es gleichgültig, ob ich schreibe: „Dies ist ein Blindtext“ oder „Huaudet gefburn?“ Kjflj – mitnichten! Ein Blindtext bietet mir wichtige Informationen. An ihm messe ich die Lesbarkeit einer Schrift, ihre Anmutung, wie harmonisch die Figuren zueinander stehen und prüfe, wie breit oder schmal sie läuft. Ein Blindtext sollte möglichst viele verschiedene Buchstaben enthalten und in der Originalsprache gesetzt sein. Er muss keinen Sinn ergeben, sollte aber lesbar sein. Fremdsprachige Texte wie „Lorem ipsum“ dienen nicht dem eigentlichen Zweck, da sie eine falsche Anmutung vermitteln.

Und nun folgt – ob man es glaubt oder nicht – der dritte Absatz. Dies hier ist ein Blindtext zum Testen von Textausgaben. Wer diesen Text liest, ist selbst schuld. Der Text gibt lediglich den Grauwert der Schrift an. Ist das wirklich so? Ist es gleichgültig, ob ich schreibe: „Dies ist ein Blindtext“ oder „Huaudet gefburn?“ Kjflj – mitnichten! Ein Blindtext bietet mir wichtige Informationen. An ihm messe ich die Lesbarkeit einer Schrift, ihre Anmutung, wie harmonisch die Figuren zueinander stehen und prüfe, wie breit oder schmal sie läuft. Ein Blindtext sollte
